\*This suggested schedule is only a guideline, and assumes a math background sufficient to allow a student to enroll in CHEM 111 the Fall Semester of Year 1.

Recommended electives are upper-division chemistry, advanced topics in chemistry, upper-division mathematics, upper-division physics, foreign language, and life science courses. Chem 286 or 386, Directed Reading, is a good option as a 1-credit elective course. These are both seminar audience courses, where chemistry seniors and Masters students will present research seminars, along with some interesting guest speakers.
